

## Abstract

The invention is based on a drive shaft (10) for a windshield wiper, to which shaft a crank (12) is fastened.

5           It is proposed that a base body (14) of the drive shaft (10) is made from an extruded light metal profile and on its free end, in the region of a fastening part, carries a connection part (16, 22) of a harder material, which has a screw thread (18).
